# THE NEC PC-FX PRICE GUIDE

"Roifee"  
the PC-FX mascot

While NEC's Turbografx-16 was a minor player in the United States, its Japanese counterpart, the PC Engine, was a force to be reckoned with overseas. It gave Nintendo real competition and outsold even the mighty Sega. So, when NEC announced that they were releasing a sequel to the PC-Engine (TG-16) there were high expectations for the PC-FX console.

NEC initially started developing a new console to ultimately replace the PC Engine in 1990. Originally codenamed the "Iron Man FX" and also referred to as "Project Tetsujin" the prototype board was 25MHz RISC processor with a custom developed chipset and was quite impressive for the time. Since the demand and market for PC Engine games was still very strong, NEC chose to delay the console release as to not anger PC Engine developers and publishers.

By the time December 23, 1994 rolled around, the "Iron Man FX" had been redesigned, renamed and released as the PC-FX. The console industry had evolved as well, and the transition from primarily 2D game design to 3D game design was well underway. The PC-FX's architecture was a 2D powerhouse coming of age in the new world of three-dimensional polygon graphics. While the system's architecture did allow for 3D rendering, it was hopelessly outgunned by the competition. Upon release, the 32-bit console appeared overwhelmed by other more powerful 32-bit players such as the 3DO, Sega Saturn, Sony Playstation and even Bandai's Playdia. Coupled with the five-hundred dollar price tag, NEC's PC-FX had picked a tough fight to win!

While the PC-FX was lackluster concerning 3D graphic processing, the two-dimensional specs were far superior to anything else on the market. For example, the PC-FX could decompress thirty full screen jpeg images every second. In essence, the PC-FX could play crisp full-motion video without any additional hardware at a time when other consoles required supplementary equipment just to display grainy mpeg compressed video files. In fact, other consoles could not even come close to shuffling the amount of pixels in real-time on-screen as the PC-FX, nor did they have the 16 million color palette.

NEC's console was also capable of playing audio CDs, CD+Gs and even Kodak Photo CDs. It could also be connected to NEC brand computers which allowed the computer to use the PC-FX as an external SCSI CD-rom drive.

Several accessories were made available for the PC-FX. As well as additional controllers, NEC's machine allowed for memory expansion and was also one of the first consoles to offer a mouse peripheral. The mouse allowed games such as Power Dolls and Farland Story much easier to control than with the standard controller and ultimately more enjoyable to play. Perhaps the most impressive of accessories was the NEC PC-FXGA/981F which allowed for homebrew software, including games, to be written and shared amongst other PC-FX owners.

Physically, the PC-FX looks very different from the typical gaming system. At a time when computer gaming was hot and CD-rom technology was still young, NEC chose to make a bold statement by designing the PC-FX to look like a miniature tower computer. It even contained three expansion ports for upgrades and peripherals.

While the PC Engine had strong support with the development community, the PC-FX had very little support. To encourage more development, NEC allowed just about any content onto the console, and as a result its library is very heavy with hentai and dating simulation software. Despite the platform being so liberal with its policies, only about two-dozen software developers signed up to make games. Even more dismal is the fact that only a handful of publishers actually released games for the console. Other than NEC themselves, only Hudson Soft, Cocktail Soft, Naxat Soft and Sonnet published software for the PC-FX.

Since the console never gained acceptance within its own country of Japan, it never ventured to other markets. A total of sixty-two games were released along with four demo discs. First Kiss Story was the system's final release before being discontinued in the spring of 1998. In the four years that the PC-FX was being actively sold, it moved less than four percent of the number of units of its predecessor, the PC Engine. In total, less than 100,000 PC-FX units were manufactured and sold making it one of the more embarrassing performances of a gaming platform in the history of video games. However, its low volume and availability combined with its distinctive software library makes the console very unique and collectable.

## Failsafe

For the Atari 7800

Designed by Bob DeCrescenzo

distributed by Atari Age ([atariage.com](http://atariage.com))

Hello, retro-heads! Return to the cold war, when game theory was all the rage, and the RAND corporation decided the best move was to always betray your opponent! Dust off your Atari 5200, for yet again it is the only thing capable of stopping Armageddon. But wait, this time the crisis is so great you have to pull out the big guns, the Atari 7800. *Failsafe*, for the *Atari 7800*, is a homebrew sequel to *Countermeasure*, for the *Atari 5200*.

The scenario in both the original and the homebrew sequel is a nuclear holocaust that will be caused by "terrorists". Your job is to use your tank to travel and destroy until you can locate the failsafe code and stop the nuclear missile launch on Washington D.C. Both *Countermeasure* and *Failsafe* have graphics that look like an SSI strategy game. Your tank moves around at a slow pace in the landscape or at an even slower pace THROUGH the landscape. You can move through almost any terrain, such as bushes, houses, water, etc. There are some tunnels and walls that you cannot go through but must go into.

The enemy army consists of rotating Radar Towers or "Pillboxes", Airplanes, Terrorists on foot, a rectangular bar for a jeep that follows you and shoots, etc. The playfield is such that you have a stats bar running along the top of the screen, and a gas meter along the bottom. The stats meter shows the lives remaining, the current level or "terrain" number, ((1-6) levels possible), your score, the high score, and the launch countdown.

The 7800's left and right difficulty switches sets the amount of Tanks you start with and the amount of time allotted for guessing the failsafe code. You can also play on 3 different skill levels, Novice, Intermediate, and Advanced.

In reviewing this sequel to *Countermeasure*, I asked myself a simple question. Is it fun? The answer is yes. You roam about the countryside to find the failsafe code and stop global doom. It is fun to drive your tank around and combat the enemies, and to try to get further and further along towards the goal.

The gun turrets and radar towers rotate slower than you move. You simply stay out range while they fire, and move in to attack while they are rotating. The jeeps and terrorists are the hardest things to shoot down. The cruise missiles are probably second. The pillboxes and stationary shooters are relatively easy, unless you are at an advanced stage.

The sound consists of sound effects and a repetitive song with the title screen.

(normal for an old-school game) There is no in-game music, which seems like the right choice. You can concentrate on your attack against the enemy.

The graphics are adequate and look similar to *Countermeasure*. The collision detection seems fine as far as I can tell.

One of the things you will be dealing with in the game are the many power-ups you can pick up. All of these are "letters" you drive over after destroying an enemy. I do not know if there is a reproducible pattern or if you can remember what power-ups are where each time. You shoot lots of enemies, but power-ups are only awarded here and there, not for every blown up gun turret or radar station.

Two power-ups that you will notice right away are F (freeze) and S (speed). Speed is one of the best power-ups, your tank moves so much faster than its somewhat tedious normal pace. F will freeze your enemies and you can pick a few off before it goes away.

The other power-ups are: (I) invincible, (D)istance- shoot farther than enemies can, (T)ime- 5 more minutes added to the countdown, (P) layer- extra life, (L)etter- one letter of the failsafe code revealed, (E)nergy-refills your gas tank.

In comparison to *Countermeasure*, there are some obvious differences. *Countermeasure* scrolls upwards while *Failsafe* scrolls to the right. *Countermeasure* has a 2 player mode, *Failsafe* does not. Another difference in *Countermeasure* is that you can make the tank and its turret move separately with the horrible 5200 controllers. The simplified movement in this new 7800 game is an improvement. In *Countermeasure*, you shoot farther diagonally. I wasn't able to get the tank to shoot diagonally in *Failsafe*. However, the *Failsafe* manual says you have an advantage with vertical shots, but I hadn't noticed this. *Countermeasure* has varying slow speeds for different terrain. *Failsafe* seems to go at the same rate through all terrain.

There are 0-9 skill levels in *Countermeasure*, and it seems harder than its unofficial sequel from the get-go. This may not

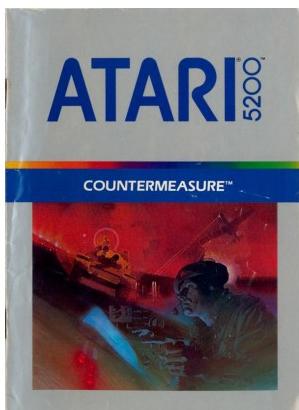

*Countermeasure* (Atari 5200)

*Failsafe* (Atari 7800)

matter much since *Failsafe* increases in difficulty every time you beat the game. Eventually, you will be defeated by the terrorists, and Washington D.C. will be gone. Nuclear destruction will almost surely come next. And although you guessed the failsafe code correctly many times, and delayed mankind's destruction, at some point the game becomes futile.

This game is the opposite of reality. In it, the only winning move is to play.

*Countermeasure* original box art (Atari 5200)

## The Sega Master System Game Guide

Derek Slaton

This is the ultimate guide to the games of the Sega Master System. Every title has all the important information, is reviewed, and is presented in a way that really gets to the heart of the game. Hard hitting questions like "Why are they only sending a single attack helicopter to defeat an entire army?" and "Why did every action game in the 80's involve you rescuing your girlfriend?" are not only asked, but explored. This isn't your typical reference guide.

## Down From the top of its Game The Story of INFOCOM Rolenta Press

*Down From The Top Of It's Game: The Story of Infocom*, was originally written as a college thesis at MIT. This edition, a collaboration between Rolenta Press and Good Deal Games, marks its first appearance in book form.

Available for \$10 at Rolenta Press ([www.RolentaPress.com](http://www.RolentaPress.com)) and/or Good Deal Games ([www.GoodDealGames.com](http://www.GoodDealGames.com)).

The following is an excerpt from the book.

### Introduction

They generated a buzz around the computer industry. Their products drew glowing reviews from *Time*, *Newsweek*, *Discover*, and even *Rolling Stone*. They created the games that people played - games that captivated, perplexed, and amused thousands around the world. They were the creators of *Zork*, the first interactive fiction game, and the founders of Infocom.

Infocom debuted its first product in 1980 with the release of *Zork* for the TRS-80 Model I. *Zork* soared to the top of the bestseller lists, remained there for months, and attracted a cult following. Fans devoted hours staring at computer screens, trying to solve the game's puzzles and desperately seeking help whenever stumped. Actor Robin Williams was said to have called one of the authors of *Zork* in the middle of the night asking for hints.

With sales topping \$10 million in 1984, Infocom seemed poised to dominate the software entertainment industry for years to come. Thousands of eager fans snatched up copies of *Zork II*, *Zork III*, *Starcross*, and *Deadline* as soon as they were released. No one, it seemed, could get enough of Infocom's games. "We're making them as fast as we can!"

an advertisement declared.

Suddenly, everything began to fall apart. Infocom spent millions of dollars to develop a database program called *Cornerstone*. Even though *Cornerstone* sold 10,000 copies in its first year, the company went into the red, losing over \$4 million in 1985. For the first time, Infocom struggled to pay its bills. Layoffs began.

The company needed help badly. Help came in the form of a corporate merger: Activision, a game company based in California, agreed to buy Infocom for \$7.5 million and cover its outstanding debts.

The Activision buyout marked the beginning of the end of Infocom as a company.

Even with popular releases as *The Hitchhiker's Guide to the Galaxy* and *The Leather Goddesses of Phobos*, the company lost \$200,000 per fiscal quarter from 1987 to 1989.

Finally, in 1989, Activision closed Infocom's office in Cambridge, Massachusetts.

Activision offered 11 of the 26 remaining Infocom employees positions in its Menlo Park, California office, but only five accepted. The rest moved on.

It is tempting to conclude simply that Infocom's decision to make *Cornerstone* led to its inevitable failure. After all, how could a computer game company know anything about making databases? The shift to databases, however, was not as haphazard and ill-conceived as it might at first appear. In fact, many of Infocom's founders had originally formed the company with the intent to make business software, not games. To this end, *Zork* gave them the money to fund what they had originally intended to do. Furthermore, *Cornerstone* made sense to Infocom's longterm financial health. Created by people who did, in fact, have an understanding of databases, *Cornerstone* was a way to diversify the company's product line and help Infocom grow even faster.

This book traces the history of Infocom, starting with its roots as a group of MIT students and faculty. It explores the period when Infocom soared to the top of the software entertainment industry, through the transition from making games to developing business products, and the end, after the Activision buyout. The story shows that a combination of factors, not a single technical or managerial decision, led to Infocom's success and failure. Infocom succeeded in making popular games not only because it decided to make *Zork* available on personal computers, but also because it developed an effective system for supporting new platforms, maintained an engineering culture that excelled at writing computer games, and marketed its products to the right audience.

Nor did Infocom fail simply because it decided to make *Cornerstone*. Infocom failed for many reasons that were closely tied to how the company managed the transition to business products. Behind the scenes, the transition created a litany of problems—skyrocketing costs, depletion of resources, and internal conflicts.

Combined with some bad luck, these problems, and not just *Cornerstone* per se, ultimately led to Infocom's downfall.

### Infocom Takes Off

Around the time Infocom began, big, expensive mainframe computers dominated the market. In 1979, that all changed when Dan Bricklin and Bob Frankston released *VisiCalc*, the first electronic spreadsheet and "killer app" for the personal computer. People purchased personal computers just for the sole purpose of using *VisiCalc*. Apple, Commodore, Atari, IBM, and Radio Shack had a whole range of models available, but each one garnered a small percentage of the market.

Personal computers cost over a thousand dollars each, and owners tended to be wealthy and well educated. Doctors, businessmen, lawyers, and other professionals could afford the price tag. The owners of the personal computers also tended to enjoy reading - a factor that would prove critical to the success of Infocom's games.

The emerging personal computer market presented a golden opportunity for Infocom, but its founders faced a difficult challenge: How could they make *Zork*, which barely ran on a PDP-10, work on comparatively tiny microcomputers?

### Making *Zork* Fit On Personal Computers

Berez and Blank spent one month in Pittsburgh together discussing the feasibility of porting the complex and addictive world of *Zork* to smaller computers. It was a daunting technical task - they would be faced with limitations on all fronts, from memory size to processor power. And to complicate matters, they would have to support multiple platforms, since there was no clear market leader in the

VEI

### THEY UNLEASHED THE WORLD'S MOST POWERFUL GRAPHICS TECHNOLOGY

The success and failure of Infocom, a company founded by members of MIT's Laboratory for Computer Science, resulted from a combination of factors. Infocom succeeded not only because it made *Zork*, a text-adventure game, available on personal computers, but also because it developed an effective system for supporting new platforms, maintained an engineering culture that excelled at writing computer games, and marketed its products to the right audience.

Similarly, Infocom did not fail simply because it decided to shift its focus to business software by making *Cornerstone*, a relational database. Infocom failed for many reasons that were closely tied to how the company managed the transition to business products. Behind the scenes, the transition created a litany of problems that hurt both the games and the business divisions of the company. Combined with some bad luck, these problems - not simply the development of *Cornerstone* - ultimately led to Infocom's downfall.

# HIDDEN GEMS

*Bloody Wolf*, developed by Data East and designed by Yoshiaki Honda, does for the TurboGrafx 16 what *Contra* does for the NES. It rocks the machine! Originally released in the Arcades (1988), *Bloody Wolf*, also known as *Battle Rangers* (Europe), made its US console debut on NEC's *Turbografx 16* (1990). This run and gun game features game play similar to *Ikari Warriors* and Data East's *Heavy Barrel* to name a few.

While both the Arcade and home versions of *Bloody Wolf* share several similarities, there are some differences. The co-op mode was removed from the home version, but an extra level that can't be found in the arcade version was added. The home version also provides more of a back story to the game, and adds more dialogue between the player and hostages' throughout the game. The Rosary in the arcade version was changed in the home version to a lucky rabbit's foot instead.

The premise of the game is simple; you play as either Eagle or Snake on a mission to rescue hostages and the president at all costs! From being able to jump on a motorcycle with a machine gun to mowing down enemies, you know Bloody Wolf means business from the very first level. Throughout the game you rescue hostages that offer you tips on the whereabouts of the president as well as a friendly thank you. It's easy to get a little gun crazy in this game, so be careful not to shoot the hostages by accident, or blow them up. Oh yeah, did I mention the awesome motorcycle action!

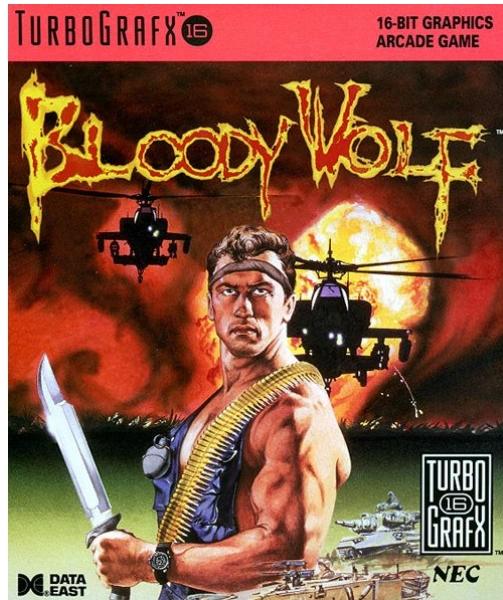

You play through eight levels ranging from jungle terrains to cliffs, to a detention camp. In every level you will come across several weapons including: a shotgun, grenades and more. Plus you can get down and dirty with your trusty Rambo style knife for close-quarters combat. You will also collect items along the way in the back of trucks and buildings, such as keys and medicine, to aid you on your journey. At the end of every level you are pitted against a boss. From a submarine, to a crazed man with a Flamethrower, you better watch your step.

The final boss stripes away your weapons with his boomerang leaving you to do battle with just your knife!

One insanely cool aspect to this game, that I have rarely seen done, is that once you beat the final boss and rescue the president, the game is not over, you have to escort him to safety and at the end there is no more room for you on the rescue chopper so you sacrifice yourself and stay behind being captured in the process, at this point the game continues on to the added eighth level where you now play as the other character that you didn't play as the first time.

By land, by water or by Motorcycle, all while blowing enemies away to an awesome sound track, Bloody Wolf for the Turbografx 16 offers action junkies everything they could ever want in a 16-bit run and gun game.

Bloody Wolf is a very common game to find, so for those with a Turbografx 16, you owe it to yourself to add Bloody Wolf to your collection. It can be picked up for between \$10-\$17. And for those of you with a Wii, break out your war paint and Wii Points. You can download Bloody Wolf on the Wii Virtual Console.

# made IN JAPAN

by Gerard Buchko

Released in 1998 in Arcades on the SEGA ST-V Titan hardware, followed by a SEGA Saturn release later that year, Radiant Silvergun is a shmup (shoot'em up) that almost didn't come to be. According to the diary of Hiroshi Iuchi, the director & producer of Radiant Silvergun, there was a time where the very future of his dream project was in jeopardy. It was back in November of 1996 that the idea for Radiant Silvergun came "echoing" in his head. It would be shortly after this that Iuchi would receive a team for his project. "This... This... This is my chance! The time for me to make the shooting game of my dreams has come!!" says an ecstatic Iuchi who has been wanting to work on a shmup for the past 9 years. This would only last for a few months as the project disappeared in January of 1997 (the reason is not exactly known as Iuchi's diary translates to simply state that his "company disappeared...no one survived...").

Iuchi, not willing to give up on his dream, began shopping his project around to other game companies. Unfortunately (or fortunately depending on how you look at it) the other game companies Iuchi approached all had a similar response of "Aren't shooting (shmup) games dead?" It was this response that led to Iuchi stopping his visit to other game companies. In less than a month, Iuchi received a call from Treasure asking him to return to the company. Iuchi, agreed to come back with the simple hope that he will get another chance to make his shmup. March rolled around and thanks to Treasure's president, Masato Maegawa, Iuchi got his chance and began working as director and producer on Radiant Silvergun.

Radiant Silvergun is a vertically scrolling shmup that was influenced by the shmup genre as a whole, with the game Image Fight being the main influence. But to say Radiant Silvergun is a mash up of all previous shmup games would do the game a grave injustice as Radiant Silvergun is truly a unique shmup full of new ideas. For example, in Radiant Silvergun, there are no power ups. You start off the game with all seven of your weapons. These seven weapons include three basic weapons, plus three weapon combinations (similar in theory to the weapons in Gunstar Heroes, another one of Treasure's classic games), and a unique sword attack. The three basic weapons can also be leveled up to become more powerful. You start off with your three basic weapons at level zero with a level cap of 33 for each weapon. Leveling up your three basic weapons depends on how many points you earn with each individual weapon. The three basic weapons are the vulcan (standard shot weapon), the homing (shoots two homing green pulse bullets), and the spread (shoots two bombs out on angles). Now, for the weapon combinations. If you press both the A and B button you get the homing plasma. The homing plasma is the only weapon that can shoot through walls. When you press both A and C you get the back wide shot. When you press B and C you get the lock on spread. The final weapon is the radiant sword. This is the

strongest weapon in the game. When you press A, B, and C together, you will swing a short ranged sword in a circle around yourself. If you continue to hold down A, B, and C after you swing the sword, the sword will remain \*unholstered in the opposite position of the last button you've pressed. This allows a more direct concentration of your sword attack on a single enemy. Besides being a strong attack, you can \*also absorb the pink bullets that some of the enemies fire at you for a charge up attack. Once you absorb 10 pink bullets, your next sword attack will be transformed into the hyper sword. This attack is done with two large swords that swing and converge in front of your ship. You become invincible while executing this attack.

The boss battles in Radiant Silvergun are also full of epic moments right from the moment they first lumber out onto the screen. Some bosses are completely massive in

size and include multiple parts that need to be destroyed. If you want the 100% perfect bonus, you need to destroy every part prior to destroying the main core. Treasure does a great job pushing both the SEGA ST-V Titan and Saturn hardware to its knees. bask in the beautiful glory of intricate bosses that move in and out of the foreground and background.

So big deal, Radiant Silvergun has seven weapons that can be leveled up.

Does this constitute the current price tag of 150 - 500 dollars? To better answer this question we need to dive into the actual game design. Radiant Silvergun is intricately designed so that there is a specific and correct weapon to get through each part and section of every stage as well as to defeat every boss with a perfect 100%. While the placing of enemies, gun turrets, laser barriers, pathways, and bosses made up of multiple parts with a central core make it so that you need the varied weapons to progress safely. Boss battles also have a hidden time limit. So, if the path has gun turrets on your left and right, you need to use your side bombs. Have way too many enemies and turrets, then you have to use your homing spread locks. Swamped with pink bullets? absorb them with the sword to get the hyper sword, and save the hyper sword to use as a "smart bomb" for when you get in trouble. Have enemies hiding behind a wall? Get a head start with the homing plasma.

If you're still on the fence with the price range for a copy of Radiant Silvergun, we still got one more aspect to discuss, the chaining system. In order to earn big points (and level up your weapons faster), you must chain enemy attacks. The chaining system is based on the order of enemy colors

## RADIANT SILVERGUN

レディアント・シルバーガン

TM

that you destroy. Enemies generally come in red, blue, and yellow colors. For every three enemies of the same color you destroy, you earn a chain bonus. If you continue to destroy three enemies of the same color after the initial chain, a multiplier kicks in to increase your bonus points. In essence, keep destroying enemies of the same color and watch your bonus points sky rocket. The game also contains secret chains that increase the amount of bonus points earned. Chaining is critical for leveling up your basic weapons fast.

There are currently two versions of Radiant Silvergun, the arcade version that ran on SEGA's ST-V Titan hardware and the SEGA Saturn port. Both versions are Japanese and require Japanese hardware. The SEGA Saturn port is actually the more complete version of the game. This version includes both the original arcade mode and a Saturn mode that includes animated cut scenes by Gonzo studios, voice acting, and a complete story that makes sense. While it seems odd to cut animations that are vital to the story, Treasure's president, Masato Maegawa said that the reason for cutting these out of the arcade version was because "There's only so much you can put into an arcade version because no matter what you do, the game has to be fast. Arcade players don't like waiting and they hate these kind of intro demos. All these movie sequences were cut from the arcade version."

Forget about the limited production amount, or the collectors value, Radiant Silvergun is such a damn fine game that I personally feel the Saturn port is well worth the rather expensive price tag of around \$150-\$250 for a complete used copy, or \$400+ for a brand new sealed copy.

\* Important for the joke in this issue's Press Start Comic.

## Buck Rogers, Planet of Zoom. Your one chance to defeat the toughest enemy of all. Time.

If you've played Buck Rogers, Planet of Zoom in the arcades, you've had a taste of what space chase action is all about. Now maybe you're ready for something even better.

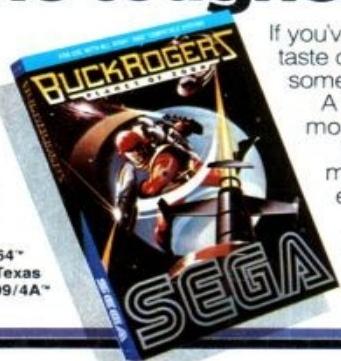

A home game that takes the arcade version and makes it even faster, more challenging, more fun.

You'll battle your way through 3-D space. Maneuver through bullet-firing magnetic poles and alien saucers. Shoot it out with hopping droids and enemy fighters until you face the ultimate challenge, the mother ship.

But time is not on your side. You have to be fast to destroy the mother ship. If you're too slow, kiss mother goodbye.

Look for Buck Rogers at your local store. But hurry. This is one game that's really moving fast.

## SegaSonic the Hedgehog Arcade

You may be surprised to learn that one of the least well-known Sonic games may actually be one of the best. Marking Sonic's first entry into the coin-op scene, SegaSonic the Hedgehog Arcade paved the way for Sonic's only other arcade outing – Sonic Fighters.

SegaSonic the Hedgehog was released only in Japan arcades in June of 1993. It did make it across the ocean unofficially to other areas such as the United Kingdom, where Sega itself imported the game for its Sega World arcade in London. Since the game was never meant to leave the island of Japan, the menus and dialogue are available only in the native Japanese language. However, the game play itself is universal, easy to navigate and a blast to play!

The game stars Sonic the Hedgehog, and also introduced two new characters to the Sega franchise. If you think that Mighty the Armadillo looks a lot like Sega's long lost brother, it was not by accident. Mighty was actually the original design concept for Sonic before being dumped. Other than this arcade outing, Mighty only makes a brief appearance in the 32x game Knuckles Chaotix. Ray the Flying Squirrel is just plain abandoned after his debut in this coin-op, never to be heard from again in videogame format. Ray's adventures did continue in Archie Comics' Sonic the Hedgehog comic book series.

Dr. Eggman, known as Dr. Robotnik stateside, has set up base on an island and hatched yet another plan to conquer the world! When Sonic, Mighty and Ray unexpectedly find themselves on Eggman Island, they are captured and incarcerated in a large foreboding tower.

SegaSonic the Hedgehog plays like, and has many similarities to, the classic coin-op Marble Madness. It has a similar isometric layout and players use an optical trackball to traverse a linear obstacle course to reach the end of each level. The island is beset with many assorted environmental dangers such as flowing lava, falling stalactites, rolling boulders

and other traps set by Dr. Eggman.

SegaSonic features three-player simultaneous coop play and to date is the only coin-op game to feature three trackballs on a single cabinet! Sonic, Mighty and/or Ray can journey alone or play together. Beware, although the other players are your friends, they also serve as obstacles, crowd the screen and use resources.

To play, press the jump button to perform a jumping spin attack to crush enemies as in other Sonic titles. Since the game pushes the player to traverse the island as fast as possible, the player can also simply zoom past enemies to avoid direct confrontation altogether. WHIMPS!

Unlike other Sonic titles, and more like a traditional game, Sonic has an energy meter. When damaged by an enemy or hazard, his energy is partially drained. Grabbing rings scattered throughout the levels replenishes Sonic's energy meter.

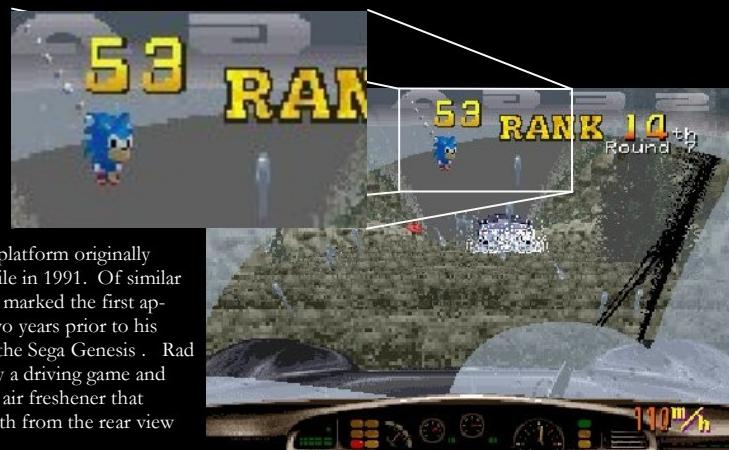

Between levels, animated intermissions move the story forward by showing Dr. Eggman tracking the three heroes across the island and feature him formulating catastrophe! SegaSonic the Hedgehog Arcade also introduced dialogue to the Sonic franchise and gave voice to the characters for the very first time during these cut scenes.

Sadly, SegaSonic the Hedgehog was never released on a home console. At one point it was being considered for the Sonic Gems Collection. However, upon porting the game it became apparent that the trackball control scheme did not translate well to the traditional control pad.

The game's hardware was designed and built upon Sega's own proprietary System 32 motherboard arcade platform originally created for Rad Mobile in 1991. Of similar interest, Rad Mobile marked the first appearance of Sonic, two years prior to his own series debut on the Sega Genesis. Rad Mobile was obviously a driving game and Sonic appeared as an air freshener that dangled back and forth from the rear view mirror.

You may be interested to know that when those "in the know" sort through the game's code, they find sprite graphics of the SatAM Robotnik character from the Sonic the Hedgehog animated television show.

This is curious since this artwork never appears in the game. It is possible that the game was being prepared for the North American market and perhaps would have replaced the Japanese Dr. Eggman char-

acter with SatAM Robotnick, a character more familiar to our region.

If you ever spot SegaSonic the Hedgehog in the wild, be sure to deposit any coins you might have jingling in your pocket. It is a very rare opportunity and a wild ride sure to please Sonic fans and others alike.

# PRICE GUIDE INTRODUCTION \* ATARI 2600

Welcome to Video Game Trader's Price Guide. Our values reflect what you should expect to pay for an item on the open market. Please remember that we are human. If you see a common game for \$400 or a rarity for \$1, please let us know. It's probably just a mistake.

The Guide is split apart by "Generation." In each generation we may have special lists that will appear in this issue only.

If we have updated or changed a price you will see a "+" or a "-" next to the price for each item. "+" indicates a price increase, while "-" indicates a price decrease. An "[HB]" designation next to a game means that this title is a HomeBrew game. We may list prices for complete games (**CIB** - Games with original case, manual and any maps), game only (**Loose** - cartridge or cd only), or both may appear in the listing.

All prices assume that the games are clean (no rental stickers or markings).

## Second Generation

In the history of video games, the second generation (sometimes referred to as the early 8 bit or 4 bit era) began in 1976 with the release of the Fairchild Channel F.

The Atari 2600 was the dominant console for much of the second generation, with consoles such as the Intellivision, Odyssey 2, and ColecoVision also enjoying market share.

The second generation came to an abrupt end in 1984 amid the video game crash of 1983.

# Fifth Generation

The fifth-generation era (the 32 bit era, 64 bit era and/or the 3D era) refers to the video game consoles available at the close of the 20th century. The fifth was dominated by three consoles, the Sega Saturn, Sony PlayStation, and the

The collage includes the following elements:

- The main header "VIDEO GAME TRADER MAGAZINE" and sub-header "KEEPING CLASSIC VIDEO GAMES... ALIVE!"
- Issue #15 cover featuring the Intellivision console.
- A "PRICE GUIDE" section.
- An article titled "Grand Theft Auto IV: The iPad Application" dated April 1, 2010.
- A "POSTS" section with social media links (RSS, Twitter, Facebook, Email).
- Advertisements for "ColonXR Advanced Internal Cleansing Formula" and "Choose an all-new 16GB iPod Nano."
- Links to "THE LOVE BUTTON" and "GET GRAND THEFT AUTO IV ON YOUR IPAD."
- Logos for "Video Game Connection" and "www.VideoGameTrader.com".
